(a) Single-Frame State 4 Adaptive Mesh (9,568 elements)
Secondary Refined (h_min=0.069 mm); Primary Relaxed (0.00% <= l0/2)

(b) History-Aware Dual-Corridor Mesh (10,597 elements)
eta_hist = max(eta_1, eta_2) with coarseningFactor=NOT_ALLOWED

(c) Primary Corridor Detail: History-Aware Refinement
Continuous refinement preserved between notch tip (x=10) and central hole

(d) Corridor Resolution Comparison Across Methodologies
History-Aware envelope achieves simultaneous dual-branch resolution
